Introduction

For many years the Geological Survey issued subject indexes to the wide variety of publications produced by the Branch. The first covered the period 1863-1884; this was followed by other indexes for the periods 1885-1906, 1907-1909, 1910-1926 and 1927-1950. The expansion of the Geological Survey that followed the Second World War resulted in a great increase in the number of reports published and it proved too time consuming to continue the preparation and production of subject indexes using the then available techniques. However a listing of all publications issued between 1845 and 1958 was published in 1959. Subsequently listings covering varying periods have been made and from time to time have been combined, the last two compilations being the Index to Publications for 1959-1974 and for 1975-1979.

The Geological Survey has for more than a decade been a participant in a computer-based bibliographic database called GEOSCAN and since 1981 has managed the National GEOSCAN Centre which co-ordinates input from the eight participating provinces, several federal agencies and the Canadian Society of Petroleum Geologists. The 1975-1979 Index to Publications was produced from this database, as is this Index.

The Index comprises listings by publication, author and NTS (National Topographic System) areas. The Publication Listing provides complete entries; the author and NTS entries have been abbreviated.

GEOSCAN also includes listings by subject, province or territory and geological time division. Users who require this information should make direct use of GEOSCAN which is available on-line through the GSC Library in Ottawa. The large number of entries especially in the subject field, precludes the economical production of a hard copy version of these parts of the database.

Prices are not included in the database but to enable this publication to serve as a sales catalogue a separate price list has been added. To assist in using the NTS finding list, a figure illustrating the National Topographic System is included at the end of this publication.

Introduction

Depuis de nombreuses années, la Commission géologique publie des index par sujet du vaste éventail de ses publications. Le premier index couvre les publications parues entre 1863 et 1884; les suivants, les périodes 1885-1906, 1907-1909, 1910-1926 et 1927-1950. L'importance accrue que prend la Commission géologique après la Seconde Guerre mondiale se traduit par une augmentation considérable du nombre de rapports publiés; on constate alors que la préparation et la publication d'index par sujet à l'aide des techniques disponibles prend trop de temps. Toutefois, une liste des publications parues entre les années 1845 et 1958 est publiée en 1959. Par la suite, on dresse d'autres listes couvrant diverses périodes qui sont parfois fusionnées, les deux dernières compilations étant l'Index des publications des années 1959 à 1974 et celui de 1975 à 1979.

La Commission géologique a été pour plus d'une décennie un participant actif au système de renseignements bibliographiques informatisé connu sous le nom de GEOSCAN et depuis 1981, elle a la responsabilité administrative du Centre national GEOSCAN qui comprend huit partenaires provinciaux, plusieurs agences fédérales et la Société canadienne des géologues pétroliers. L'Index des publications pour 1975-79 a été réalisé à partir de ce système comme d'ailleurs la présente édition.

L'Index donne des listes classifiées par publication, par auteur et aussi suivant les régions du Système national de référence cartographique (SNRC). Le catalogue intitulé «Liste des publications» donne des entrées complètes; il est à noter que les entrées par auteur et du SNRC ont été abrégées.

GEOSCAN comprend aussi des listes classées par sujet, province et territoire ainsi que par l'échelle des temps géologiques. Les usagers qui requièrent le service de GEOSCAN peuvent l'obtenir par imprimante à la bibliothèque de la CGC à Ottawa. Le nombre considérable d'entrées notamment au niveau des sujets empêche la production rentable d'une version imprimée de ces données.

Le coût n'inclus pas la base des données, mais afin de donner à cette publication un caractère de catalogue servant aussi pour la vente, on lui a ajouté une liste des prix. Pour faciliter l'usage de la liste classifiée selon le système SNRC, un tableau d'assemblage de ce système a été ajouté à la fin de cette publication.

The National Topographic System designates numbered areas as indicated with subdivisions shown in insets

Le Système national de référence cartographique identifie, d'une part, les régions par des nombres, comme il est indiqué, d'autre part, chacune des régions est à son tour subdivisée comme l'indiquent les encarts
